

RAJESHKUMAR K

DevOps Engineer | Kubernetes · OpenObserve · OpenTelemetry

+91 98946 48632 rajeshkumar.k5445@gmail.com Bengaluru, India (open to relocate)

LinkedIn linkedin.com/in/rajeshkumark65 Portfolio rajeshkumark65.github.io

CORE SKILLS

Kubernetes & CI/CD

Kubernetes · Azure AKS · Helm · ArgoCD · GitLab · Jenkins · Nexus · Docker · Nginx ingress · Linux

OpenObserve & OpenTelemetry

OpenObserve · OpenTelemetry · Pipelines · VRL functions · Alerts · Dashboards · OTel Collector

Monitoring & logging

Prometheus · Grafana · VictoriaMetrics · ELK Stack · Alertmanager · Uptime Kuma

Reliability

Root-cause analysis · Distributed tracing · SLO alerting · Jira

Scripting

Bash · Python · SQL · PromQL

Gen AI monitoring (beginner)

LiveKit · NVIDIA GPU · LiteLLM · n8n · Langfuse

Soft skills

Communication, problem-solving, teamwork, collaboration, leadership, adaptability

EDUCATION

B.E. Mechanical Engineering
Kongu Engineering College
2019 · CGPA 9.01 / 10
Languages: English, Tamil

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900)
- IBM DevOps Fundamentals
- Udemy: Kubernetes Overview
- Udemy: Prometheus Monitoring & Alerting

PROFILE

DevOps engineer with 1.5+ years on **Kubernetes** production platforms, on-prem and on **Azure AKS** (Kubernetes layer). My role is split evenly: I lead observability R&D on **OpenObserve** and **OpenTelemetry**, and I own production issues for 20+ live smart-city and IoT projects, keeping each inside its SLA.

20+ live projects
monitored and troubleshot daily

OpenObserve R&D lead
unified logs, metrics and traces

Data Lake House monitoring
better health visibility and alerting

Proactive operations
issues fixed before clients notice

EXPERIENCE

Associate DevOps Engineer

Trinity Mobility Pvt Ltd · Bengaluru · TAC (production support) — Mar 2025 – Present

Production & SLA owner (50%)

- **SLA-driven proactive monitoring**: LnM alerts on node, pod, volume and capacity health (70 / 80 / 90%) raise Jira tickets before an SLA breach, sharply cutting production red alerts.
- **Root cause, not just restart**: own client production issues end to end; node, storage and workload failures (NFS hangs, DiskPressure, clock drift, OOMKilled loops) fixed so they do not repeat.
- **Cluster installation**: set up new on-prem Kubernetes clusters (control plane, workers, networking, ingress, storage) when a project needs one; run workloads on Azure AKS at the Kubernetes layer.
- Closed **critical security exposures** (exposed services, Nginx hardening) and automated certificate-expiry tracking.

OpenObserve & OpenTelemetry R&D lead (50%)

- Lead development of **OpenObserve on Kubernetes** as the unified platform for logs, metrics and traces across the company.
- Build **alerting pipelines, VRL functions and real-time alerts** that catch service and resource issues early, automated through the OpenObserve API.
- Designed the **OpenTelemetry agent + gateway** collector architecture; onboarded Java microservices, WSO2, NiFi and data-lake engines.
- Enabled **end-to-end tracing** with trace–log correlation for faster RCA.
- **Improved Data Lake House monitoring**: health, performance and alerting for Spark, Trino, Airflow, Kafka and MinIO.

Release pipeline

- Changes go **Git → GitLab → Jenkins build → Nexus artifact → ArgoCD/Helm sync**, then the full application flow is validated end to end, device to dashboard, before sign-off.

Earlier

DevOps Engineer Intern, StarAgile (with IBM) · Apr – Aug 2024 · CI/CD with Jenkins, AWS with Terraform, Docker and Kubernetes.
