

RAJESHKUMAR K

DevOps Engineer | Kubernetes · OpenObserve · OpenTelemetry

+91 98946 48632 rajeshkumar.k5445@gmail.com Bengaluru, India (open to relocate)

LinkedIn linkedin.com/in/rajeshkumark65 Portfolio rajeshkumark65.github.io

CORE SKILLS

Kubernetes

Kubernetes · Helm · ArgoCD · GitLab CI/CD · Docker · Nginx ingress · Linux

OpenObserve & OpenTelemetry

OpenObserve · OpenTelemetry · Pipelines · VRL functions · Alerts · Dashboards · OTel Collector

Monitoring & logging

Prometheus · Grafana · VictoriaMetrics · ELK Stack · Alertmanager · Uptime Kuma

Reliability

Root-cause analysis · Distributed tracing · SLO alerting · Jira

Scripting

Bash · Python · SQL · PromQL

EDUCATION

B.E. Mechanical Engineering
Kongu Engineering College
2019 · CGPA 9.01 / 10

Languages: English, Tamil

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900)
- IBM DevOps Fundamentals

PROFILE

DevOps engineer with 1.5+ years running **Kubernetes** production platforms for 20+ live smart-city and IoT projects. I lead observability R&D on **OpenObserve** and **OpenTelemetry** and take client issues to the root cause.

20+ live projects
monitored and troubleshot daily

OpenObserve R&D lead
unified logs, metrics and traces

Data Lake House monitoring
better health visibility and alerting

Proactive operations
issues fixed before clients notice

EXPERIENCE

Associate DevOps Engineer

Trinity Mobility Pvt Ltd · Bengaluru · TAC (production support) Mar 2025 – Present

Kubernetes in production

- **Cluster build to go-live**: install and configure on-prem Kubernetes clusters (control plane, workers, networking, ingress, storage) for new projects.
- **Release with end-to-end validation**: ship releases via GitLab CI/CD and ArgoCD/Helm, then validate the full app flow, device to dashboard, before client sign-off.
- **Post go-live server ownership**: fix node, storage and workload failures (NFS hangs, DiskPressure, clock drift, OOMKilled loops) at the root cause.
- **SLA-driven proactive monitoring**: early-warning alerts on node, pod, volume and capacity health raise Jira tickets *before* an SLA breach, sharply cutting production red alerts.

OpenObserve & OpenTelemetry development (R&D lead)

- Lead development of **OpenObserve on Kubernetes** as the company's unified platform for logs, metrics and traces.
- Build **alerting pipelines, VRL functions and real-time alerts** that catch service and resource issues early, automated through the OpenObserve API.
- Designed the **OpenTelemetry agent + gateway** collector architecture; onboarded Java microservices, WSO2, NiFi and data-lake engines.
- Enabled **end-to-end tracing** with trace–log correlation for faster RCA.
- **Improved Data Lake House monitoring**: health, performance and alerting for Spark, Trino, Airflow, Kafka and MinIO.

Client issues & security

- Own client production issues end to end: **restore, find the root cause, then prevent repeats** with self-healing and automation.
- Closed **critical security exposures** (exposed services, Nginx hardening) and automated certificate-expiry tracking.

Earlier

DevOps Engineer Intern, StarAgile (with IBM) · Apr – Aug 2024 · CI/CD with Jenkins, AWS with Terraform, Docker and Kubernetes.
